Take off on one of the greatest adventures of a lifetime—Learn to Fly.

Aviation is a critical part of life in Alaska. Approximately 82% of the Alaskan communities are not served by roads. This is why there are 6 times more pilots per capita and 16 times as many aircraft per capita compared to the rest of the United States. Becoming a pilot gives access to new frontiers and new job opportunities.

How do I get started?

The adventure begins with your first flight lesson, your "Introductory Flight," a chance to familiarize yourself with the airplane, the airport, and the flying environment. During most introductory flights, you sit in the left seat and fly for the majority of the flight. The lesson consists of up to an hour of flying and an hour with an instructor on the ground. For only \$150, you begin the adventure of a lifetime. Call MARC at (907) 262-5388 to schedule a flight.

At what age can I earn a Pilot Certificate?

The FAA requires a minimum age of 16 for solo flight and 17 for a certificate. However, you may begin flight training at any age. After your private license, you can progress to an instrument rating, and maybe begin a career in Aviation with a commercial license or a flight instructor certificate.

What is the average length of time needed to earn a private pilot rating?

On average, a Private Pilot Certificate can be obtained in a period of 3 months to one year and approximately 65 hours. The FAA requires a minimum of 40 hours of flight time. Of the 40 hours, 20 must be with an instructor and at least 10 must be solo. Your lessons will consist of a combination of private study, classroom learning, and flying the airplane. We recommend you fly at least twice a week.

Do I need a medical exam to begin taking lessons?

No, you do not need an FAA medical exam until you are ready for your first solo flight. But we do advise students to get a medical early in their training in case there are any unknown, underlying issues which will exempt the student from flying privileges.

We have been teaching people to fly for more than 40 years.

What is the average cost of obtaining a private pilot rating?

The cost varies by the type of aircraft used for training and the frequency of lessons, but the average cost is between \$10,000 and \$15,000.

Sample Cost Estimate: Private Pilot Certificate

55 hours, Cessna 172	\$7700.00
60 hours, Instruction	\$3000.00
Check ride, Medical, Written	\$ 900.00
Books, supplies	\$ 400.00
Estimated Cost:	\$12,000.00

What written tests and flight tests are required to get my private pilot rating?

Student pilots have to pass a pre-solo written exam before solo, a private pilot written exam (FAA), and a practical exam (flight test).

The first step in learning to fly is as simple as stopping by or calling us to schedule your first flight.
